

AMENDMENTS TO THE SPECIFICATION

Please amend paragraph 30 on page 12 of the specification, as follows:

[0030] The tone presence/absence decider 25C, like the tone presence/absence decider ~~25B~~ 25A, should preferably use a band-pass filter that is also adapted to simply pass a single frequency. This is because the FAX tone signal T3 has a single frequency and therefore a single frequency peak, like the signaling tone T1. In this case, signal power is also calculated on the basis of a signal having passed through the band-pass filter.

AMENDMENTS TO THE DRAWINGS

Please replace Figure 4 of the drawings with the replacement sheet attached at the end of this Amendment.
